

## Rose Floral Wax

[INCI: Rose (Centifolia floral) Wax]

[CAS No.: 84604-12-6]

### [Description & Appearance]

Rose wax is a by-product of rose essential oil extraction. Its melting point is relatively low (it slowly melts in the vegetable oil when the temperature rises to 50 degrees), which makes it more suitable for cold soap making.

The by-products produced by refining rose essence contain a high proportion of rose essential oil, the charming and domineering rose aroma will bring fresh taste and precious skin care effects to your skin care products, could be added in lipsticks, handmade soaps, creams and lotions to retains moisture and nourish the skin, helps the skin restore its own elasticity, activates cells and increases skin resistance in dry weather.

### [Applications]

It is recommended to replace beeswax in high-end lipsticks and skin care products, eg. lipsticks, handmade soaps, creams, lotions and other solid or semi-solid formulations, adding beautiful natural aroma and thicker density to beauty products.

### [Technical data]

Tesing Items	Results
ECHA EC Number:	283-289-8
Appearance	Ivory white to yellow solid
Odor	Fragrance of Rose
Melting/Freezing Point	50-60 °C
Relative Density	0.89
Solubility	Not soluble in water, soluble in Ethanol

### [Shelf life]

Min 36 months in cool and dry circumstance, protect from direct sunlight, water and humidity sources.

### [Package]

1kg/block, 20kg/carton.
